

EXECUTIVE SUMMARY

FNP Sales Trends Analysis Dashboard

1. Project Overview

This project involved the end-to-end analysis of sales data for Ferns and Petals (FNP), a gifting company that specializes in delivering gifts for occasions such as Birthdays, Anniversaries, Diwali, Holi, Raksha Bandhan, and Valentine's Day. The objective was to transform raw transactional data into actionable business insights that support strategic decision-making, improve customer satisfaction, and optimize sales performance.

The project was developed entirely in Microsoft Excel and demonstrates the practical application of data analytics, business intelligence, and dashboard development techniques.

2. Business Problem

FNP generates a large volume of sales transactions across different products, occasions, and locations. However, raw transactional data alone provides limited visibility into customer purchasing behavior, product performance, delivery efficiency, and revenue trends.

The goal of this project was to build an interactive dashboard that enables stakeholders to:

- Monitor overall revenue performance.
- Analyze monthly sales trends.
- Identify top-performing products.
- Understand customer spending patterns.
- Evaluate delivery performance.
- Compare sales across occasions.
- Analyze geographic demand distribution.
- Support data-driven business decisions.

3. Methodology

3.1 Data Extraction, Cleaning, and Transformation

Power Query Editor was used to:

- Import and consolidate datasets.
- Handle missing values and inconsistencies.
- Standardize data formats.
- Create calculated fields.
- Prepare clean datasets for analysis.

3.2 Data Modeling

A relational data model was developed using Power Pivot.

The model consisted of three core tables:

- Customers
- Orders
- Products

The tables were connected through **Customer_ID** and **Product_ID**, establishing one-to-many relationships that enabled efficient analysis and reporting. This structure reduced redundancy, improved data integrity, and enhanced dashboard performance.

3.3 Data Analysis

Pivot Tables were used to:

- Aggregate revenue metrics.
- Analyze customer purchasing behavior.
- Evaluate product performance.
- Examine delivery timelines.
- Compare sales across occasions and locations.

3.4 Dashboard Development

An interactive Excel dashboard was created featuring:

- Dynamic charts
- Slicers
- Timeline filters
- KPI visualizations
- Revenue trend analysis
- Product and customer insights

The dashboard enables users to explore sales performance from multiple business perspectives.

4. Key Business Questions Addressed

The dashboard was designed to answer the following strategic questions:

1. What is the total revenue generated?
2. How long does it take on average to deliver customer orders?
3. How do sales fluctuate throughout the year?
4. Which products generate the highest revenue?
5. How much do customers spend on average?
6. How are the top-performing products contributing to revenue?
7. Which cities generate the highest order volumes?
8. Does order quantity influence delivery performance?
9. Which occasions generate the most revenue?
10. Which products are most popular during specific occasions?

5. Key Insights

The analysis revealed several important business trends:

Revenue Performance

Revenue generation varies significantly across product categories, occasions, and seasons, indicating strong demand fluctuations throughout the year.

Seasonal Demand Patterns

Sales exhibit clear seasonal behavior, with occasion-based events driving spikes in customer purchases. Special celebrations and holidays contribute substantially to overall revenue.

Product Performance

A small group of products contributes a significant portion of total revenue, highlighting the importance of maintaining inventory and marketing focus on top-performing products.

Customer Purchasing Behavior

Customers demonstrate varying spending patterns depending on the occasion, suggesting opportunities for targeted promotions and personalized marketing campaigns.

Geographic Distribution

Order volumes are concentrated in specific cities, indicating high-demand markets those present opportunities for localized marketing and operational expansion.

Delivery Performance

Monitoring delivery timelines provides valuable insight into operational efficiency and customer satisfaction, enabling the business to identify opportunities for service improvement.

Occasion-Based Sales

Different occasions contribute differently to revenue generation, allowing management to prioritize campaigns, inventory planning, and promotional activities around high-performing events.

6. Business Value

This dashboard provides management with:

- A centralized sales monitoring solution.
- Faster access to business insights.
- Improved decision-making capabilities.
- Better understanding of customer behavior.
- Enhanced visibility into operational performance.
- Data-driven support for marketing and inventory planning.

7. Tools and Technologies Used

Area	Tool
Data Cleaning & Transformation	Microsoft Power Query
Data Modeling	Power Pivot
Data Analysis	Pivot Tables
Dashboard Development	Microsoft Excel
Data Visualization	Excel Charts & Slicers
Reporting	Microsoft Excel

8. Skills Demonstrated

This project showcases expertise in:

- Data Cleaning and Transformation
- ETL Processes
- Data Modeling
- Relational Database Concepts
- Business Intelligence
- Dashboard Design
- Data Visualization
- KPI Development
- Sales Analytics
- Excel Power Query
- Excel Power Pivot
- Advanced Excel Reporting
- Customer Analytics

Conclusion

The FNP Sales Trends Analysis Dashboard successfully transformed raw sales data into meaningful business intelligence. By integrating Power Query, Power Pivot, Pivot Tables, and interactive dashboarding techniques within Excel, the project delivers a comprehensive view of revenue performance, customer behavior, product trends, and operational efficiency. The solution empowers decision-makers with actionable insights that can be leveraged to enhance customer satisfaction, optimize product strategy, improve delivery performance, and drive overall business growth.
